

Cambridge Polymer Group

MD&M West, Anaheim California

Visit CPG at the MD&M West Expo and Conference in Anaheim

California, [February 10-13](#), booth 941.

This comprehensive event is the ultimate platform on which medical device industry experts discuss the latest technologies and explore future developments. [Learn more here](#).

Water, water, everywhere nor any drop to drink

West Virginia's drinking water situation has been getting a lot of press in the past week. Two toxic chemicals have been identified in the water (polyglycol ethers (PPH) and 4-methylcyclohexanemethanol), introduced from a tank rupture at Freedom Industries, a coal-cleaning operation. Prior to yesterday, only the methylcyclohexanemethanol had been known to be in the water, since the water contamination analytical tests commonly

used only look for species that are suspected to be in the water, rather than any species. When Freedom Industries indicated that PPH was also released, the water analytical labs knew to look for this species as well. [Read on here.](#)

Additives in Biomedical Polymers

Committee F04 is seeking abstracts for a workshop on Additives in Biomedical Polymers, to be held on May 6, 2014 in Toronto, Ontario. This workshop is intended to elicit discussion on the benefits, potential hazards, testing, regulatory considerations, and opportunities for standards activities related to intentionally incorporated additives in biomedical polymers. Information on how to submit abstracts, which are due March 1, 2014, can be found by clicking the link below. [Learn more about this workshop here.](#)

Cambridge Polymer Group, Inc. is an ISO 9001:2008 certified contract research laboratory specializing in polymeric materials. We provide routine analytical testing on materials, custom test design, failure analysis, consultation, instrumentation, custom polymer and hydrogel formulation, and out-sourced research.
