

# Tissue Bulking with Injectable Hydrogels

## Hydrogel Medical Devices

### Summary

CPG scientists have developed a formulation of injectable hydrogel that can be used to reinforce human tissue, acting as a bulking agent. CPG hydrogels use a well-recognized biocompatible synthetic polymer, polyvinyl alcohol (PVA) that can be physically crosslinked after injection. Alternate tissue bulking materials are particle-based or are chemically crosslinked. These techniques pose potential health risks as chemical by-products can cause cell necrosis and particles can migrate. CPG hydrogels offer a safe tissue bulking agent that can be formulated for specific tissue applications.

### Description

CPG developed a permanent, non-migrating, biocompatible material suitable for percutaneous injection. In collaboration with the Massachusetts General Hospital <sup>1,2,3</sup>, this hydrogel has been used to treat mitral valve regurgitation in an ovine model. Additionally, CPG has investigated the use of this formulation for urinary incontinence and gastroesophageal reflux disease (GERD). The formulation was injected through a long, narrow-gauge catheter, and gelled in vivo without a chemical reaction. Different requirements for a specific application, including delivery systems, stiffness, and gelation time, can be met by formulation adjustment.

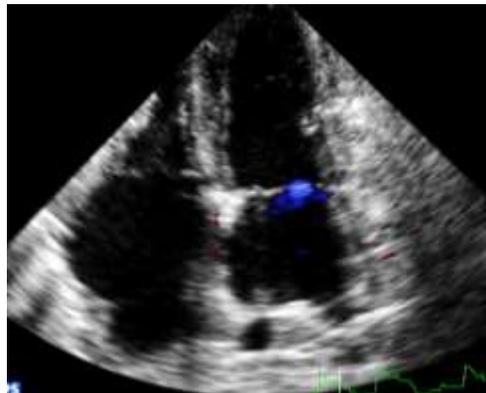

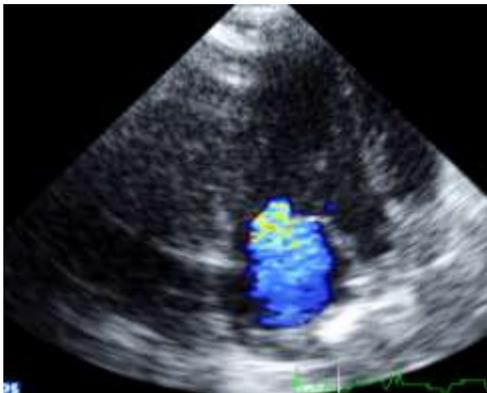

### Discussion

Injection of hydrogel into the infarcted heart muscle allows stiffening of the dead muscle and restoration of the geometry of the valve tethers. Chronic regurgitation is therefore reduced or removed with a simple, minimal access treatment. Long-term animal studies are currently ongoing but data at 6 months is highly encouraging.

### Applications

Injectable hydrogels can be utilized in support and augmentation of a variety of human tissues including urinary, cardiovascular, esophageal, and cosmetic.

Moderate MR resulting from an infarction (left ultrasound) is reduced by injection of hydrogel into the myocardial wall (arrows)

MATERIALS CONSULTATION  
RESEARCH & DEVELOPMENT

Cambridge Polymer Group, Inc. is a contract research laboratory specializing in materials. We partner with our clients to solve the world's toughest polymer problems utilizing our multi-disciplinary research team and full service laboratory.

**We work with clients throughout the product life cycle to:**

- Develop new materials
- Design prototypes for proof-of-concept studies
- Create and execute experimental design
- Validate and verify manufacturing processes
- Perform root-cause analysis in product failures

Cambridge Polymer Group, Inc. was founded in 1996 to provide a cost-effective resource for testing, research and development to clients who need periodic access to Ph.D.-level scientists and their support structure. We have developed a host of testing methods and materials for our clients, which number more than 1,000.
